

Electric Fence Dual Monitor

SECURITY ELECTRONICS

PTE0410 Series

A low cost dual-channel Electric Fence Monitor for monitoring electric fences in security applications.

This monitor compares the high voltage pulses applied to its inputs with a preset level. If the voltage falls below the preset level for an adjustable amount of time a contact is closed. The Monitor will operate with standard or bi-polar electric fence energisers that meet AS/NZS 3129 or similar.

Product features

- wall mountable IP65 enclosure
- simple, low cost, reliable analog circuit design
- 2 channel conventional or single bi-polar electric fence return inputs
- 10KV rated isolation components from fence inputs to main circuit
- change over relay dry contacts for each alarm output
- in-built lightning surge protection

Optional Features

- battery charger with AC fail and low battery relays
